Hi Lene,

Regarding your voicemail, we didn't say that we would get back to them. The situation as I recall was that the Navy requested that we respond to their parameters in a specific timeframe if they were to fund the work. Their issue was that they were unwilling to move forward with assigning the work to their contractors unless we had agreement. In response we had some discussions, including some in the June (or July?) 2019 face to face meetings in San Francisco. Some of that LNAPL discussion was delayed because GD was unable to attend. We had a follow up meeting on LNAPL after which GD attended via phone. I do not believe we were ever in a position where we agreed on an approach that we could present to the Navy.

In trying to determine a recommended path forward from the Navy's proposal for vadose zone (source term) modeling following the face to face meetings, EPA and HDOH derived two independent approaches as proposals. I believe that's where we left things as it happened right before the public meeting.

I am attaching the meeting summaries from the Navy which mention the extent of the LNAPL discussion that was had in person with Navy, as well as the supporting background for EPA and DOH's two proposed approaches. I am sure this is more detail then you're looking for but it's good to have all of the most recent correspondence in the same place.

Thanks

Lyndsey Tu
